

EMBEDDED REPORTING

The seamless reporting solution every business needs.

Integrate real-time reporting into your enterprise software. With Bold Reports® embedded reporting, users can generate, customize, and analyze reports in their familiar business application with no need for external tools.

Help your customers make informed decisions by providing real-time metrics and interactive reports within established workflows.

What Makes Bold Reports Stand Out?

- Platform follows the Microsoft SSRS RDL standards.
- Users can create detailed reports without coding using our drag-and-drop editor.
- You can share reports with unlimited users.
- SSRS RDL reports created with third-party apps can be loaded in Bold Reports or vice versa without additional effort.

SOC 2 Type 2

Our SOC 2 Type 2 certification verifies that Bold Reports has successfully completed a thorough audit, ensuring that our security policies and controls consistently meet the highest industry standards when it comes to keeping data safe.

GDPR Compliant

As a company, we take data privacy very seriously and maintain GDPR compliance with many customers in Europe.

[Contact us](#)

"Our customers are amazed at how we get them to their data so quick."

- Jon Ellis, Product manager

Bold Data Hub

This integrated ETL solution directs data flow from various sources into databases like PostgreSQL, MySQL, MSSQL and Apache Doris. Transformed data connects to Bold Reports for comprehensive analysis.

Multitenancy

Multitenancy allows a single application instance to serve multiple users or organizations, each with their own secure and isolated environment. In reporting and analytics, it ensures data segregation and security for different users or departments.

White labeling and distribution

Bold Reports can be white-labeled and easily branded as your own. You can redistribute our BI reporting with your product through a silent installation.

Key Features

Fast, Easy Integration

Users can easily integrate the Report Viewer into their application using no additional tools.

E-signature integration for reports

Users can sign reports directly within the Report Designer and Report Viewer for improved document security.

Export customization

Users can now customize file exports with support for PDF, CSV, and Excel formats. Custom properties allow greater control over export behavior for a more tailored reporting experience.

Connect to Multiple Sources

Users can connect Bold Reports to the most commonly used SQL ,NoSQL data sources, ODBC data connector, Google BigQuery data connector, local systems, SharePoint, or Internal servers.

Pixel-perfect reports

Users can view interactive, pixel-perfect reports with parameters, hyperlinks, and the ability to drill down and drill through information.

Visualize Data with Ease

The Tablix Wizard enables users to design reports in table or matrix formats, with options to group data by rows and columns for improved structure and readability.

REST APIs

Use simple REST APIs to embed enterprise reporting in your application.

Data Stays Secure

Create and manage ready-to-use enterprise reports on your server behind your firewall or with your own Azure cloud provider.

Enhanced customization for report styling

Users can now configure external custom styles or report items to enhance the visual appearance and consistency of reports.

WYSIWYG Report Designer

Perfect for creating paginated, professional reports to suit any need.

Canned Reports

Indicate trends and patterns in your reports and dig deep into your data using charts, gauges, tables, KPIs, and maps.

Complete Support for Multiple Platforms

Effective Report Management

- Use built-in multitenant architecture that serves multiple customers and quickly isolates resources with a single installation of the report management system.
- Synchronize users from Office 365 and Azure Active Directory with third-party logins.
- Schedule and share reports via email at regular intervals.
- Schedule and share reports via email at regular intervals.
- Localize and rebrand reports for a specific organization or stakeholder.
- Use an extensible and open schema that supports custom extension elements.
- Use an XML schema for report definitions.
- Maintain a history of revisions with versioning. This lets users create, modify, and easily revert to a stable version of each item.
- Empower users with an easy-to-use, web-based user interface to manage and collaborate on reports.
- Secure your system and provide one-click access to all SAML-enabled applications with single sign-on.
- Encrypt and compress documents to secure data.
- Manage costs with a simple, predictable pricing model.
- Clone and share the reports among multiple tenants.

Bold Reports® comes with the high-quality Report Viewer and Report Writer components for embedding in your web and desktop apps.

What's in the Package?

Industry-leading technical support

Bold Reports offers best-in-class **technical support** to answer your questions. We provide onboard training to use the Embedded Reporting platform.
