

Bold Reports® Offers an Improved and Secure Reporting Process

Dennis Sullivan is the owner and developer behind Sullivan IT Solutions, an IT consulting service that helps clients streamline their business processes.

Challenges

Dennis often used SSRS to create and show reports from SQL Server data, but he faced a huge issue: the SSRS portal had limited security, and it was hard to restrict certain details or access based on users. He needed a better system.

Solution

Dennis switched to the Report Viewer in Bold Reports. He no longer needs to use the Microsoft SSRS portal, has more report exporting options to choose from, and can control access to reports for a more secure reporting system.

Impact

Saving time is always a plus, and the development cycle is significantly faster with Bold Reports. Microsoft did not seem inclined to update the features of the SSRS Report Viewer, so Dennis is happy to have found a solution with Bold Reports. The tool performs better, offers a better user experience, and the return on investment has been evident immediately in both the product and the support team backing it.
